Attn Mr R Townley-Malyon

Dear Mr Townley-Malyon

We have two large boom belt self discharge vessels, which between them move approximately 5 million tonnes of aggregate per year from Glensanda in Scotland to numerous ports in Europe.

For some years now we have maintained the Cardox system on board these vessels and have found it invaluable when the need to brake up cargo has arisen.

We regard this equipment as a form of insurance policy against delaying expensive vessels due to cargo hang-ups.

Yours sincerely

Michael F Magnus
