Subject: Cardox @ Golden Bay Cement

Hello John

We use our Cardox mainly for removing large and hard build up material from inside the kiln riser of our preheater tower.

We have also cleared several cyclone blockages since using Cardox. We have found the Cardox to be the quickest, safest and most effective way to clear cyclone blockages.

We now also use the Cardox to remove large build up the bottom of 2 large steel silos. The traditional method was to put men inside these silos with jack hammers.

We have just completed the installation of a calciner. As part of this calciner installation, we had to demolish the existing kiln riser and stage 4 cyclone. **We used the Cardox to assist with the removal of the refractory from these 2 vessels.**

Cheers

Roger Roger Saunders

Hi Roger,

Hope you are well.

Just a courtesy message to ask if everything is running OK with your Cardox System?

Look forward to hearing from you,

Kind regards

John
