Subject: Cardox Usage in K6 Preheater + a Possible new Cardox Customer.

Dear John

Just a note to report that we used Cardox to assist clearing a blockage of our No.6 Kiln main feedpipe from Cyclone 4 to the Kiln inlet early last week. **Very successful**, once we got another socket cut into the actual blockage location, which was in-between 2 sockets we had already installed.

We cut one of the sockets off No.5 Kiln smokebox & re-installed it on No.6 Kiln feedpipe. We are now ordering more B37 sockets & plugs for the Upgraded Preheater & will add some spare sockets & plugs to Stores stocks for next time we want to add a Cardox port or few somewhere.

We are currently using the Cardox C74 tubes to assist clearing a lumpy buildup in the bottom cone of a cement silo, again very successful with only 2 tube-fires, so far. Our blokes are gaining more experience each time we use it.

Regards, Mik D.
